RAG System Test Document

Introduction
This is a test document for RAG backend integration tests.
It contains sample content to verify document processing.

Main Content
The RAG system uses Memgraph for unified storage.
Vector embeddings enable semantic search capabilities.
Graph relationships maintain document structure and context.

Technical Details
Documents are parsed, chunked, embedded, and stored.
Hybrid search combines vector and keyword methods.
Citations provide traceability to source material.

Conclusion
This test verifies the complete RAG pipeline.
